

## ANOTHER INJURED MINE CAT!

A while ago we shared with you the story about a seriously wounded cat that we trapped on a coal mine close to Witbank. One of her legs was hanging on a string and the other leg had serious wounds.

We have found another cat on this mine, WITH VERY SIMILAR INJURIES! Her one leg was also hanging on a string, and the other foot was cut off completely. This poor cats injuries also happened some time ago, and it is just a **miracle that she is still alive!**

Again, we had a difficult decision to make, but yet again we decided that it would be a crime to euthanize a cat that has survived for SO long, with SUCH severe injuries. She clearly had a very strong will TO LIVE!

The only conclusion is that the cats are caught somehow in the machinery at the mine, a serious reason for concern. The cats are clearly not safe at this mine, and this is the reason why we are so DESPERATE to have our own premises where we can build a huge feral sanctuary for ferals whose lives are in danger where they stay.

**On the operating table at Dr. Shelagh Hahn**

**Making excellent progress in the loving care of Melanie, Dr. Hahns assistant**

**She is now looking for a loving home!** She is not feral any more, she is a very sweet and loving cat. If you can give this special kitty a good home, please contact us.

Please help us to help them by making a kind donation and please forward this to all your friends and family.
